Kirill Demidov

Data Engineering Lead | FinOps, Product Metrics & AI-Native Analytics

Data engineering lead who owns both sides of the platform: the product metrics decisions run on, and the cloud bill that produces them. Cut BigQuery spend by 50% through slot reservation redesign and per-team cost attribution, and run FinOps as a standing discipline — cost dashboards, query analyzers, and budget monitoring — not a one-off cleanup. 18 years in BI and data platforms, the last 6 leading teams in mobile gaming and adtech on GCP, now building AI-native tooling (MCP servers, agentic workflows) that keeps AI coding agents effective in a real codebase.

CORE EXPERTISE

AI-Native Data Engineering

MCP Server Architecture · Agentic Workflows · RAG Architecture · Claude Code · Multi-Agent Tooling · Vector Databases (Qdrant)

FinOps & Cloud Cost

BigQuery Slot Reservations · Cost Attribution & Showback · Query Cost Analysis · GCP Billing Analytics · Budget Monitoring & Alerting · Capacity Planning

Data Platform

BigQuery · Dataform · dbt · Dimensional Modelling · Data Quality & Assertions · Apache Airflow

Analytics & BI

EXPERIENCE

Data Engineering Lead
July 2024 – Present · 2 yrs 1 mo

GOAT Entertainment Studios (HitZone Games, 1UP)

Own the analytics platform across both studios of the holding — Dataform/BigQuery modelling, revenue and UA data marts, data quality, self-service BI, GCP cost ownership, and production ML for game balance.

- Own the analytics warehouse: 254 Dataform/BigQuery models across product, finance, marketing, and monitoring, with 125 automated data-quality assertions.
- Brought store revenue in-house — a daily Apple/Google reconciliation that matches the finance golden source to the cent, and caught a double-counting bug that had inflated reported revenue.
- Built the UA/marketing mart — attribution, creative-level cost, cohort revenue and retention — as the single source of truth for spend decisions.
- Built and run a self-service BI portal (Python/FastAPI on Cloud Run) serving 12 dashboards to product, finance, and UA, with pipeline observability and Slack alerting.
- Built Hero Index and a RAPM-style ML model (Cloud Run) that replaced subjective balance votes with 15.67M real battles, lifting the PvE balance signal from 0.56 to 0.85 correlation.
- Own GCP FinOps for the data platform — cut BigQuery spend by 50% through a slot reservation redesign (400-slot baseline vs. 700+ peak), with no loss of query performance for downstream teams.
- Made cloud cost visible and owned: built a BigQuery cost dashboard and a query analyzer that attribute spend to teams, queries, and pipelines, turning an opaque monthly bill into per-owner accountability.
- Led the GitLab→GitHub monorepo migration (29 repos → 3) and introduced the Service Brain Pattern — a pre-development documentation standard that keeps AI coding agents and engineers aligned on service context.

Data Engineering Lead
July 2022 – July 2024 · 2 yrs

Arpeely

Leading the data engineering team, building scalable data infrastructure, and developing BI solutions using Google Cloud, BigQuery, and Dataform.

- Refactored ELT pipelines from custom Python to scalable Dataform solution.
- Designed and implemented a corporate Data Warehouse and Data Lake in GCP.
- Deployed Looker-based BI system from scratch.
- Implemented CI/CD pipelines for DWH and reporting.
- Developed a data governance monitoring system.

Data Engineering Lead
July 2021 – July 2022 · 1 yr

Tango.me

Managed a team of data engineers and BI developers, implementing data pipelines and analytics solutions in GCP.

- Led a team of 6 data engineers and BI developers.
- Developed corporate Data Lake and Data Warehouse in GCP with Airflow and dbt.
- Implemented data governance and data quality monitoring using SelectStar and SodaSQL.
- Designed and built analytics and operational reports on Looker.

Earlier experience (2008 – 2021)

Big Data Team Lead
2019 – 2021

Alterosmart Solutions

- Designed and implemented a modular data ingestion and processing backbone for Industrial Internet of Things (IIoT).

Senior BI Developer
2018 – 2019

SafeCharge

- Migrated OLAP-based BI system to a Big Data environment using AWS Data Lake (S3), Apache NiFi, and Spark.

BI Project Manager / BI & Big Data Engineer
2014 – 2018

Data Cube

- Managed BI projects for enterprise clients including BioCatch, Postal Bank, Panaya, and Amdocs.

Head of Data Management and Integration
2008 – 2014

Holocaust Victims' Assets Restitution Co.

- Developed complex data integration and knowledge management tools using MS SQL Server.

PUBLICATIONS & PATENTS

Product Analytics

Revenue Reconciliation

UA Attribution

Funnel & Cohort Analysis

Looker Power BI

Cloud & Engineering

Google Cloud Platform (GCP)

Cloud Run Python / FastAPI

SQL Docker CI/CD

US Patent 10,838,836 2020

USPTO

Data acquisition and processing platform for internet of things analysis and control. Designed a scalable IIoT routing and ingestion backbone for industrial control systems.

Merge in BigQuery and DML Limits: How to Overcome Upsert Restrictions 2024

Medium

Technical guide on optimizing BigQuery upserts and managing DML limits.

Alleviating the Headaches of Data Schema Changes for Engineers 2024

Medium

Strategies for handling evolving schemas in high-volume production data environments.

EDUCATION & CERTIFICATIONS

Hebrew University of Jerusalem 2012 – 2014

Master of Political Science

Hebrew University of Jerusalem 2004 – 2008

Bachelor of Political Science

Professional Certifications

- **Business Intelligence** (MCSE Certification, John Bryce College)
- **Google BigQuery for Data and ML Engineers** (Professional Certification, Google Cloud / Coursera)
- **Hands-On Analytics Engineering** (Course, Analytics Engineering / Masthead Data)
- **Beyond Vibe Coding with Google Gemini** (AI Developer Certification, AI Developer Community)
